Title: Kaiser Family Foundation Poll: December 2020
Kaiser Health Tracking Poll/COVID-19 Vaccine Monitor

Survey Organization(s): SSRS

Sponsor(s): Henry J. Kaiser Family Foundation

Field Dates: November 30 - December 8, 2020

Sample: National adult, including an oversample of prepaid (pay-as-you-go) telephone numbers

Sample Size: 1676

Sample Notes: None

Interview method: Telephone Interview, Cell Phone; Telephone Interview, Landline; Computer-Assisted telephone interview (CATI)

Weight Location: Columns 800-805 (x.xxxx) -- Varname: WEIGHT

No. of records per respondent: 1

Usage Notes: The sample includes interviews completed with respondents who had previously completed an interview on the KFF Tracking Poll (n = 267) or an interview on the SSRS Omnibus poll (and other RDD polls) and identified as Hispanic (n = 80; including 14 in Spanish) or non-Hispanic Black (n=179). To efficiently obtain a sample of lower-income and non-White respondents, the sample also included an oversample of prepaid (pay-as-you-go) telephone numbers (25% of the cell phone sample consisted of prepaid numbers).

Please note that data provided by the Roper Center for Public Opinion Research may not be re-disseminated without written permission. The results of any analyses conducted on the data may, however, be published with appropriate acknowledgments and source citation.

The Roper Center Transparency Score Project is intended to measure disclosure of key elements of survey research. The Transparency Score is **not** an indicator of data quality. Transparency Project scores are calculated as follows: (10 points for providing a dataset+2 points for every other applicable core item+1 point for every applicable additional item)/(total possible points) X 10. Studies with a score >=9 and <=10 greatly exceed Roper Center requirements; scores >=8 and <9 exceed requirements; and scores >=6 and <8 meet Roper Center requirements.

METHODOLOGY

This *KFF Health Tracking Poll/ KFF COVID-19 Vaccine Monitor* was designed and analyzed by public opinion researchers at the Kaiser Family Foundation (KFF). The survey was conducted November 30- December 8, 2020, among a nationally representative random digit dial telephone sample of 1,676 adults ages 18 and older (including interviews from 298 Hispanic adults and 390 non-Hispanic Black adults), living in the United States, including Alaska and Hawaii (note: persons without a telephone could not be included in the random selection process). Phone numbers used for this study were randomly generated from cell phone and landline sampling frames, with an overlapping frame design, and disproportionate stratification aimed at reaching Hispanic and non-Hispanic Black respondents. The sample also includes interviews completed with respondents who had previously completed an interview on the KFF Tracking Poll ($n = 267$) or an interview on the SSRS Omnibus poll (and other RDD polls) and identified as Hispanic ($n = 80$; including 14 in Spanish) or non-Hispanic Black ($n = 179$). Computer-assisted telephone interviews conducted by landline (391) and cell phone (1,285, including 947 who had no landline telephone) were carried out in English and Spanish by SSRS of Glen Mills, PA. To efficiently obtain a sample of lower-income and non-White respondents, the sample also included an oversample of prepaid (pay-as-you-go) telephone numbers (25% of the cell phone sample consisted of prepaid numbers). Both the random digit dial landline and cell phone samples were provided by Marketing Systems Group (MSG). For the landline sample, respondents were selected by asking for the youngest adult male or female currently at home based on a random rotation. If no one of that gender was available, interviewers asked to speak with the youngest adult of the opposite gender. For the cell phone sample, interviews were conducted with the adult who answered the phone. KFF paid for all costs associated with the survey.

The combined landline and cell phone sample was weighted to balance the sample demographics to match estimates for the national population using data from the Census Bureau's 2019 U.S. American Community Survey (ACS), on sex, age, education, race, Hispanic origin, and region, within race-groups, along with data from the 2010 Census on population density. The sample was also weighted to match current patterns of telephone use using data from the January- June 2019 National Health Interview Survey. The weight takes into account the fact that respondents with both a landline and cell phone have a higher probability of selection in the combined sample and also adjusts for the household size for the landline sample, and design modifications, namely, the oversampling of prepaid cell phones and likelihood of non-response for the re-contacted sample. All statistical tests of significance account for the effect of weighting.

The margin of sampling error including the design effect for the full sample is plus or minus 3 percentage points. Numbers of respondents and margins of sampling error for key subgroups are shown in the table below. For results based on other subgroups, the margin of sampling error may be higher. Sample sizes and margins of sampling error for other subgroups are available by request. Note that sampling error is only one of many potential sources of error in this or any other public opinion poll. Kaiser Family Foundation public opinion and survey research is a charter member of the [Transparency Initiative of the American Association for Public Opinion Research](#).
